Problem definitions for XXLTraffic and EvoXXLTraffic

XXLTraffic: Gap Forecasting

Fixed sensor set V

$$\mathbf{X}_{t-\alpha+1:t} \rightarrow \hat{\mathbf{X}}_{t+g+1:t+g+\beta}, \quad g > 0$$

Input window length: α , prediction horizon: β , temporal gap: g .

EvoXXLTraffic: Sensor-Evolving Forecasting

$$(\mathbf{X}_{t-\alpha+1:t}^{(y)}, \mathbf{A}^{(y)}, \mathbf{V}^{(y)}) \rightarrow \hat{\mathbf{X}}_{t+1:t+\beta}^{(y)}$$

Evaluate on all sensors $V^{(y)}$ and newly added sensors $\Delta V^{(y)}$.

Each year forms one streaming task.
